# TOSHIBA

COLOUR TELEVISION

## 145E7DZ

### SPECIFICATIONS

Power Input Rating:	46 watts, AC 220 volts, 50 Hz
Aerial Input Impedance:	75 ohm unbalanced type for UHF
Receiving Channels:	VHF channels ..... channels E2 to E4, E5 to E12 and S1, S2 to S20
	UHF channels ..... channels 21 to 69
Intermediate Frequencies:	Picture I-F carrier frequency ..... 38.9 MHz Sound I-F carrier frequency ..... 33.4 MHz Colour sub-carrier frequency ..... 34.47 MHz
Chassis Construction:	IC Solid State, Horizontal Chassis
Picture Tube:	14 in. A38EAC00X01, 335 mm (measured on diagonal of viewable picture area), 90° Deflection
Sound Output:	1.0 watt (at 10% harmonic distortion), Max. 1.4 watts
Speaker:	77 mm round
Cabinet:	Table type
Dimension:	Height ..... 339 cm Width ..... 384 cm Depth ..... 370 cm
Weight (Net):	9.5 kg

Specifications are subject to change without notice.

## SAFETY INSTRUCTIONS

**WARNING: BEFORE SERVICING THIS CHASSIS, READ THE "X-RAY RADIATION PRECAUTION," "SAFETY PRECAUTION" AND THE "PRODUCT SAFETY NOTICE" INSTRUCTIONS BELOW.**

### X-RAY RADIATION PRECAUTION

1. The E.H.T. must be checked every time the receiver is serviced to ensure that the C.R.T. does not emit X-ray radiation as result of excessive E.H.T. voltage. The nominal E.H.T. for this receiver is 19.0 kV at zero beam current (minimum brightness) operating at 220V a.c. The maximum E.H.T. voltage permissible in any operating circumstances must not exceed 20.9 kV. When checking the E.H.T., use the 'High Voltage Check' procedure on page 5 in this manual using an accurate E.H.T. voltmeter.
2. The only source of X-RAY radiation in this receiver is the C.R.T. To prevent X-ray radiation, the replacement C.R.T. must be identical to the original fitted as specified in the Parts List.
3. Some components used in this receiver have safety related characteristics preventing the C.R.T. from emitting X-ray radiation. For continued safety, replacement component should only be made after referring the Product Safety Notice below.

### SAFETY PRECAUTION

1. This receiver has a nominal working E.H.T. voltage of 23 kV. Extreme caution should be exercised when working on the receiver with the back removed. Do not attempt to service this receiver if you are not conversant with the precautions and procedures for working on high voltage equipment. When handling or working on the C.R.T., always discharge the anode to the receiver chassis before removing the anode cap. The C.R.T., if broken, will violently expel glass fragments and handling faulty or new C.R.T.'s should be carried out with extreme care. Do not hold the C.R.T. by the neck as this is a very dangerous practice.
2. It is essential that to maintain the safety of the customer all cable forms be replaced exactly as supplied from factory.
3. A large part of the chassis used in this receiver is, when operating, at approximately half mains potential at all times. It is therefore essential in the interest of safety that when serving or connecting any test equipment the receiver should be supplied via a suitable isolating transformer of adequate rating.
4. Replace blown fuses within the receiver with the fuse specified in the parts list.
5. When replacing wires or components to terminals or tags, wind the leads around the terminal before soldering. When replacing safety components identified by the international hazard symbols on the circuit diagram and parts list, it must be a Toshiba approved type and must be mounted as the original.
6. Keep wires away from high voltage or high temperature components.

### PRODUCT SAFETY NOTICE

Many electrical and mechanical components in this chassis have special safety-related characteristics. These characteristics are often passed unnoticed by a visual inspection and the X-ray radiation protection afforded by them cannot necessarily be obtained by using replacements rated at higher voltages or wattage, etc. Components which have these special safety characteristics in this manual and its supplements are identified by the international hazard symbols on the schematic diagram and parts list. Before replacing any of these components read the parts list in this manual carefully. Substitute replacement components which do not have the same safety characteristics as specified in the parts list may create X-ray radiation.

# FRONT CONTROLS VIEW

## REAR VIEW

Fig. 2 Rear View

**WARNING: BEFORE SERVICING THIS CHASSIS, READ THE "X-RAY RADIATION PRECAUTION," "SAFETY PRECAUTION" AND "PRODUCT SAFETY NOTICE" ON PAGE 2 OF THIS MANUAL.**

## INSTALLATION AND SERVICE ADJUSTMENTS

### GENERAL INFORMATION

All adjustments are thoroughly checked and corrected when the receiver leaves the factory. Therefore the receiver should operate normally and produce proper colour and B/W pictures upon installation. However, several minor adjustments may be required depending on the particular location in which the receiver is operated.

This receiver is shipped completely in cardboard carton. Carefully draw out the receiver from the carton and remove all packing materials.

Plug the power cord into a convenient 220 volts 50Hz AC two pin power outlet.

Turn the receiver ON.

Check and adjust all the customer controls such as BRIGHTNESS, CONTRAST and COLOUR Controls to obtain natural colour or B/W picture.

### AUTOMATIC DEGAUSSING

A degaussing coil is mounted around the picture tube so that external degaussing after moving the receiver is normally unnecessary, providing the receiver is properly degaussed upon installation. The degaussing coil operates for about 1 second after Mains switch is switched ON. If the set is moved or faced in a different direction, the Mains switch must be switched off at least 10 minutes in order that the automatic degaussing circuit operates properly.

Should the chassis or parts of the cabinet become magnetized to cause poor colour purity, use an external degaussing coil. Slowly move the degaussing coil around the faceplate of the picture tube, the sides and front of the receiver and slowly withdraw the coil to a distance of about 2 m before disconnecting it from AC source. If colour shading still persists, perform the COLOUR PURITY ADJUSTMENT and CONVERGENCE ADJUSTMENTS procedures, as mentioned later.

### HIGH VOLTAGE CHECK

**CAUTION:** There is no HIGH VOLTAGE ADJUSTMENT on this chassis.

1. Connect an accurate high voltage meter to the second anode of the picture tube.
2. Turn on the receiver. Set the BRIGHTNESS and CONTRAST Controls to minimum (zero beam current).
3. High voltage will be measured below 20.9 kV.
4. Rotate the BRIGHTNESS Control to both extremes to be sure the high voltage does not exceed the limit of 20.9 kV under any conditions.

### HORIZONTAL OSCILLATOR ADJUSTMENT

If there is an indication of unstable horizontal sync., adjust the HORIZONTAL HOLD Control (R451) to remove the condition. Adjust the HORIZONTAL HOLD to the centre of the pull-in range.

### HEIGHT ADJUSTMENT

HEIGHT Control (R352) on MAIN Board changes the size of the picture or pattern, having an equal effect on the top and bottom. Make final adjustment to overscan the mask 2cm at top and bottom.

### FOCUS ADJUSTMENT

Adjust FOCUS Control on FLYBACK TRANS. (T461) for well defined scanning lines in the centre area on the screen.

### PAL MATRIX ADJUSTMENT

1. Tune in the colour signal of Philips pattern.
2. Set the COULOR control to obtain a proper color.
3. Connect oscilloscope to pin 12 of Q501.
4. Short R205 with a jumper wire to shut off video signal.
5. Adjust the 1H DL AMP control (R551) to coincide the ALT (B-Y) bar of Philips pattern.
6. Adjust the 1H DL PHASE control (L551) to coincide the 75% color bar of Philips pattern.
7. Repeat the procedures 4 and 5 above to obtain the control result.

### R552 ADJUSTMENT

1. Tune in the colour signal of Philips pattern.
2. Set the COULOR control to obtain a proper color.
3. Connect oscilloscope to pin 12 of Q501.
4. Short R205 with a jumper wire to shut off video signal.
5. Adjust R552 to reduce the demodulation level of R-Y fixed bar on the left side to zero.
6. Check the PAL MATRIX adjustment to readjust the PAL MATRIX, if necessary.

### BELL COIL (LM51) ADJUSTMENT

1. Receive SECAM colour bar signal.
2. Connect the synchroscope to the terminal TPM-01.
3. Adjust LM51 for the flat level of amplitude in each colour bar waveform on the scope. (See figure 3.)

Figure 3.

### **DETECTOR (LM52, RM52) ADJUSTMENT**

1. Receive SECAM colour bar signal.
2. Connect the synchroscope to the pin 20 of QM01.
3. Adjust RM52 to coincide the white level of R-Y signal and B-Y signal.
4. Adjust LM52 to coincide the white and black level of R-Y signal and B-Y signal.
5. Repeat the item 3 and 4 procedures.
6. Connect the synchroscope to the pin 9 of QM01, confirm the response for no carrier wave signal.

### **4.43 MHz OSC (CM50) ADJUSTMENT**

1. Receiver SECAM colour bar signal.
2. After completing all adjustment of Q501, proceed with steps below.
3. Short R205 with a jumper wire to shut off video signal.
4. Connect the synchroscope to the pin 12 of Q501, adjust CM50 to coincide the cyan part.

### **1H-DL (RM51) ADJUSTMENT**

1. Receive SECAM colour bar signal.
2. Connect the synchroscope to the pin 14 of QM01, adjust RM51 for flat level of amplitude in each colour bar wave form at front and back of 1H.
3. Check the 4.43 MHz OSC ADJUSTMENT to readjust the 4.43 MHz OSC, if necessary.

### **CRT GREY SCALE ADJUSTMENT**

1. Tune in an active channel.
2. Set the CONTRAST, BRIGHTNESS, COLOUR Controls to minimum.
3. Set the service SW. (S201) in the "H. LINE" position.
4. Turn the SCREEN Control (on T461) fully counter-clockwise.
5. By rotating the RED, GREEN and BLUE CUT OFF Controls (R557, R558, R559) clockwise from the minimum, set them to the mid position.
6. Rotate the SCREEN Control gradually clockwise until the first horizontal line of a colour (RED, GREEN or BLUE) appears slightly on the screen.  
Set the SCREEN Control to this position.  
At the base of the colour, rotate the remaining two CUT OFF Controls gradually clockwise until the horizontal lines of each colour appear slightly on the screen.  
The line may look like white if the CUT OFF Controls are adjusted properly.
7. Set the service SW. (S201) in the "RECEIVE" position.
8. Rotate the BRIGHTNESS and CONTRAST Controls to obtain dark grey raster. Then check the white balance in low brightness. If the white balance is not proper, retouch the CUT OFF Controls to obtain a good white balance in both low and high light areas.

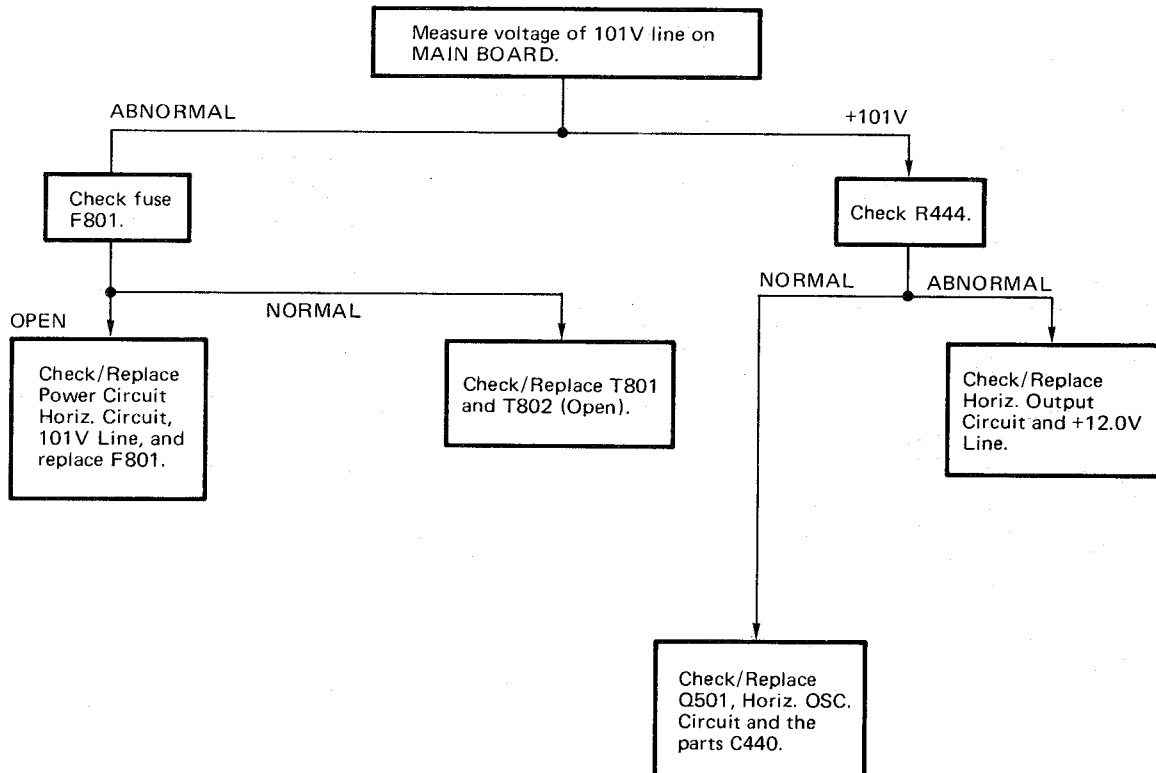

# TROUBLESHOOTING CHARTS

The following charts are devoted to troubleshooting which, if followed carefully, will assist you in tracking down a fault to the correct stage.

In order to utilize the charts (fault trees), firstly establish the complaint, e.e.-No Raster, No Sound.

Locate the chart applicable and then progress through the various alternatives until a final block indicates the offending components or stage.

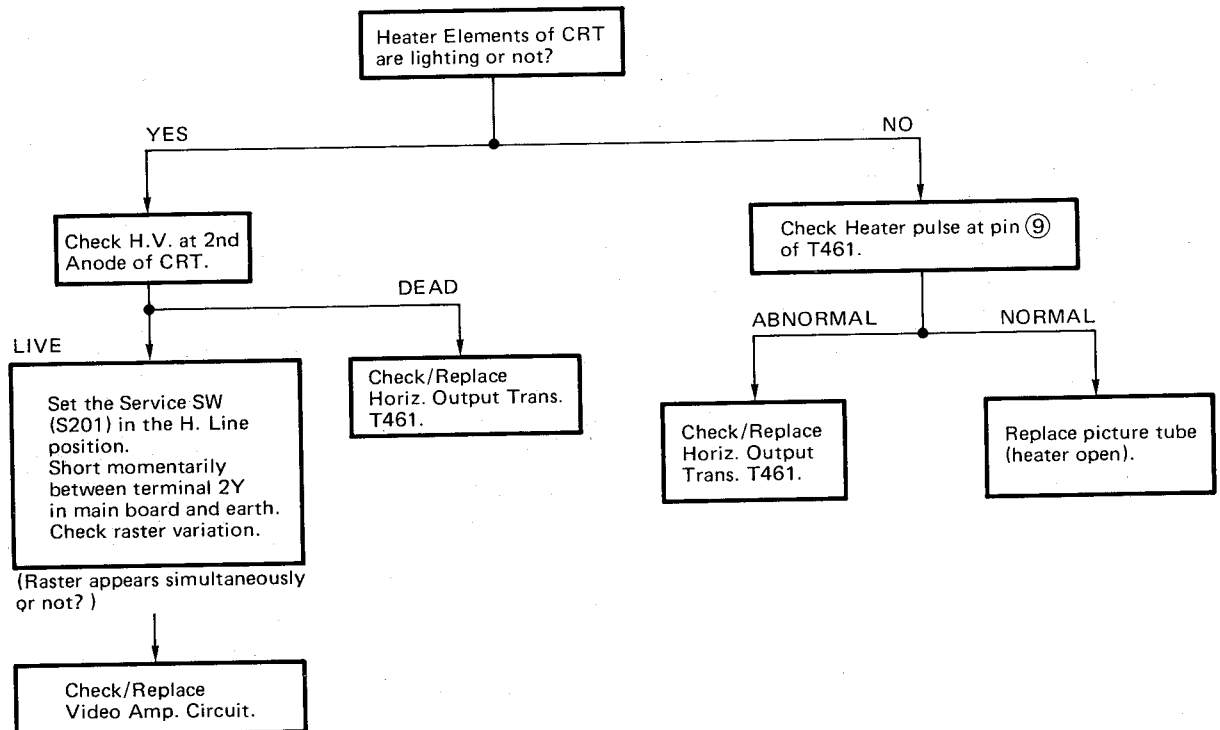

### 1. NO RASTER AND NO SOUND

### 2. NO RASTER (SOUND NOISE OR WEAK)

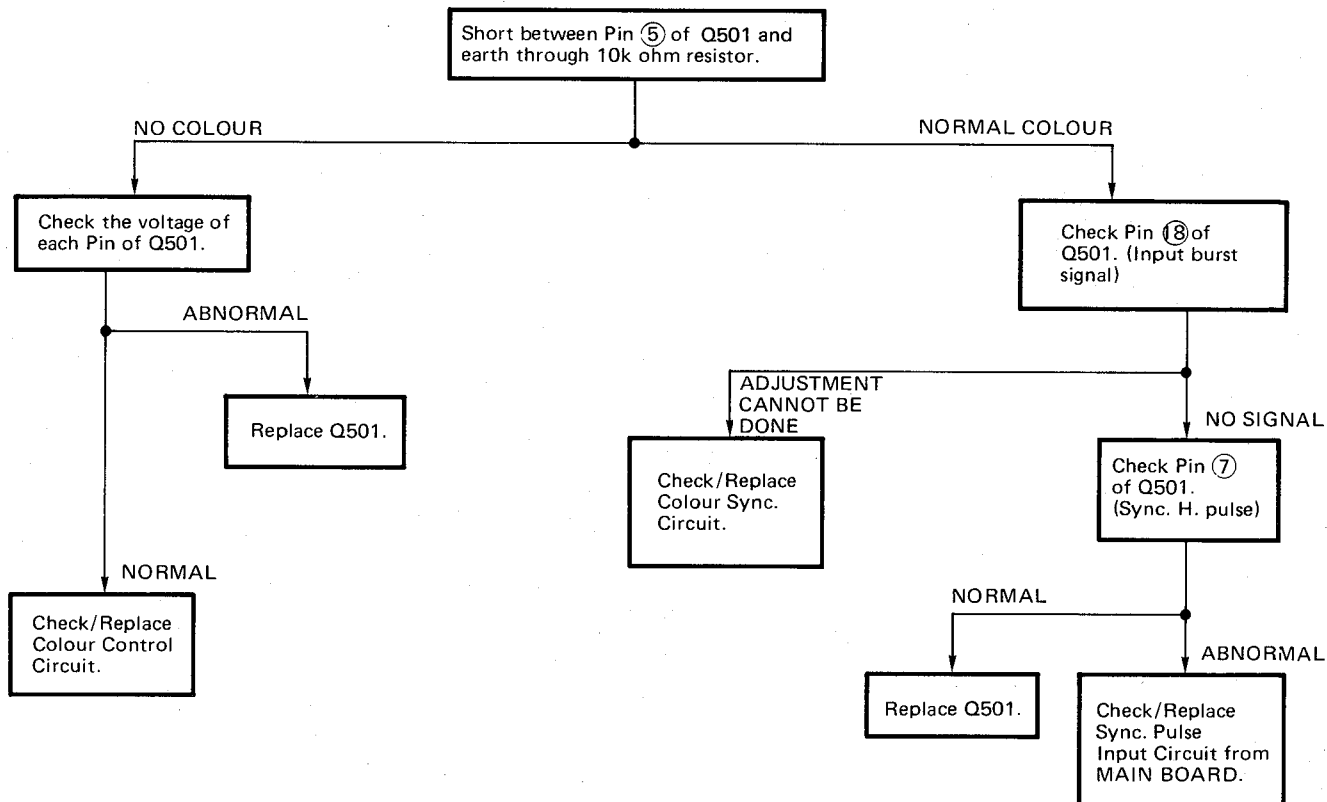

### 3. NO RASTER (SOUND OK)

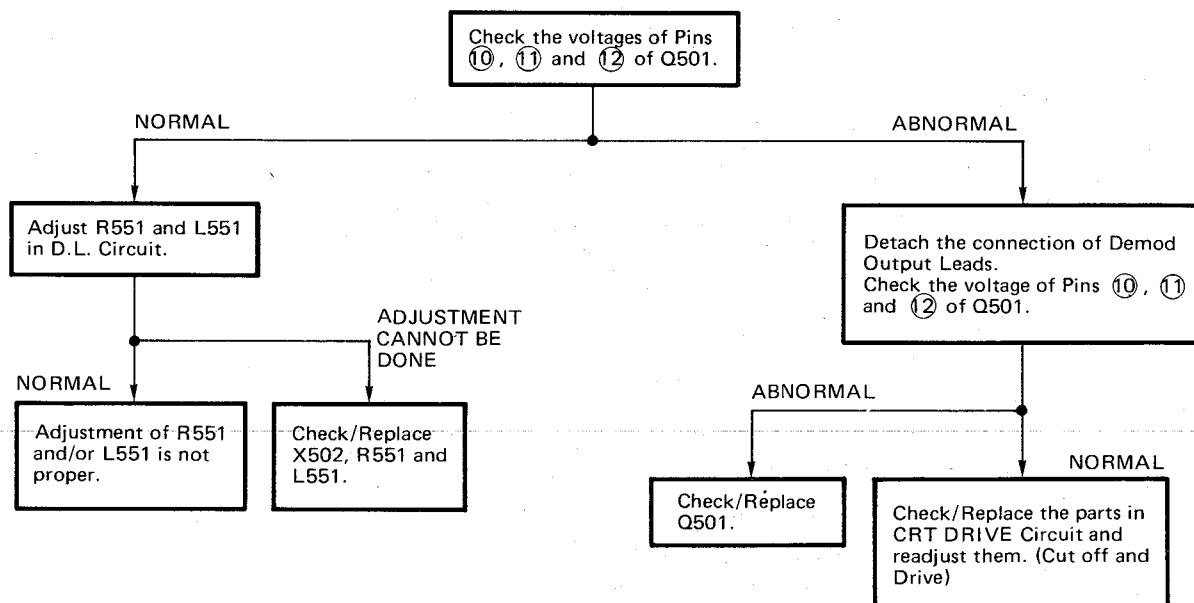

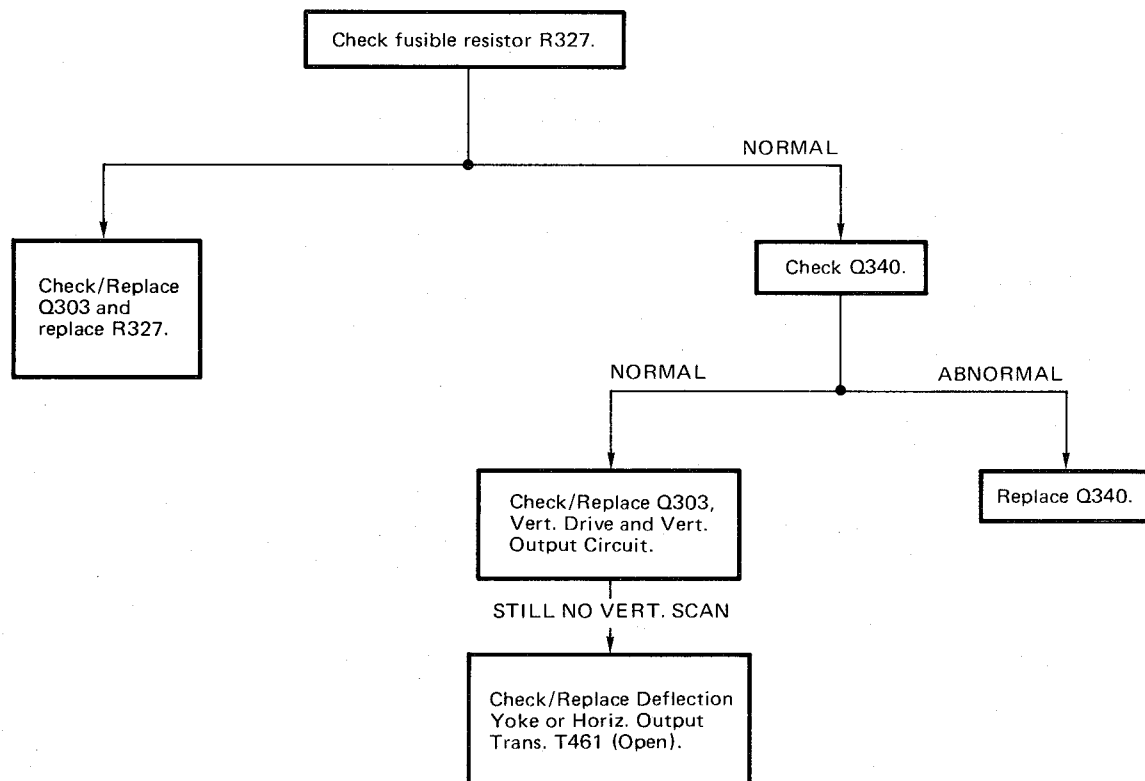

#### 4. NO COLOUR

#### 5. SPECIFIC TINTED COLOUR

## 6. NO VERT. SCAN (ONE HORIZ. LINE RASTER)

## 7. OUT OF VERT. SYNC. AND HORIZ. SYNC.

Check/Replace Sync. Circuit from pin ⑤ of Q340 to pin ⑥ of Q340.

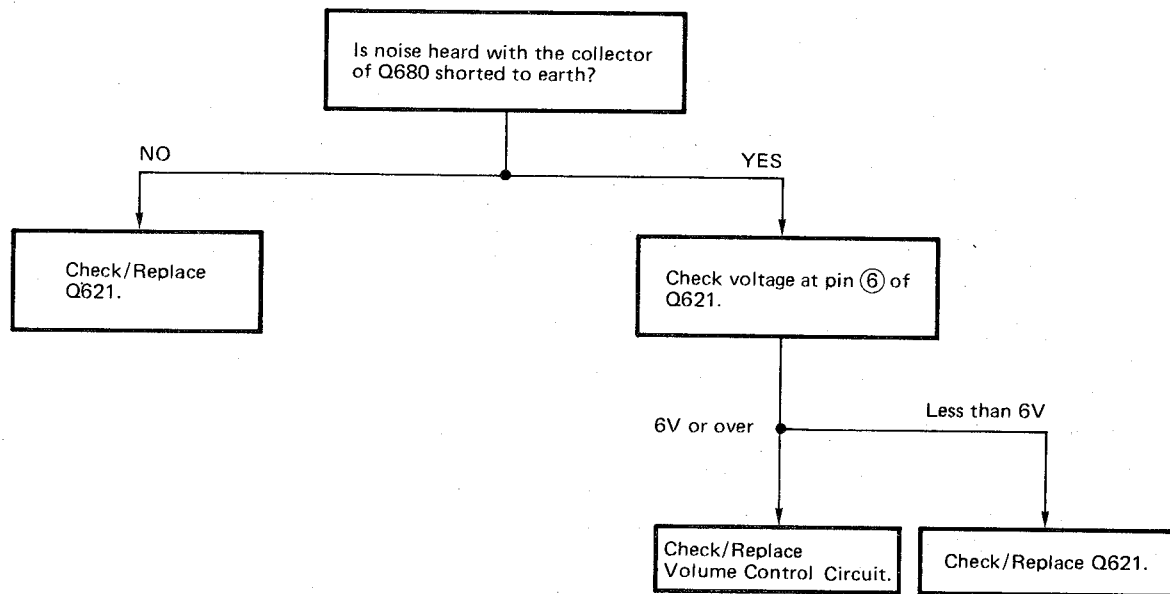

## 8. OUT OF VERT. SYNC.

Check/Replace Vert. OSC Circuit and Vert. Hold Circuit connected to Pins ①, ② and ⑩ of Q340. Check/Replace Q340.

## 9. OUT OF HORIZ. SYNC.

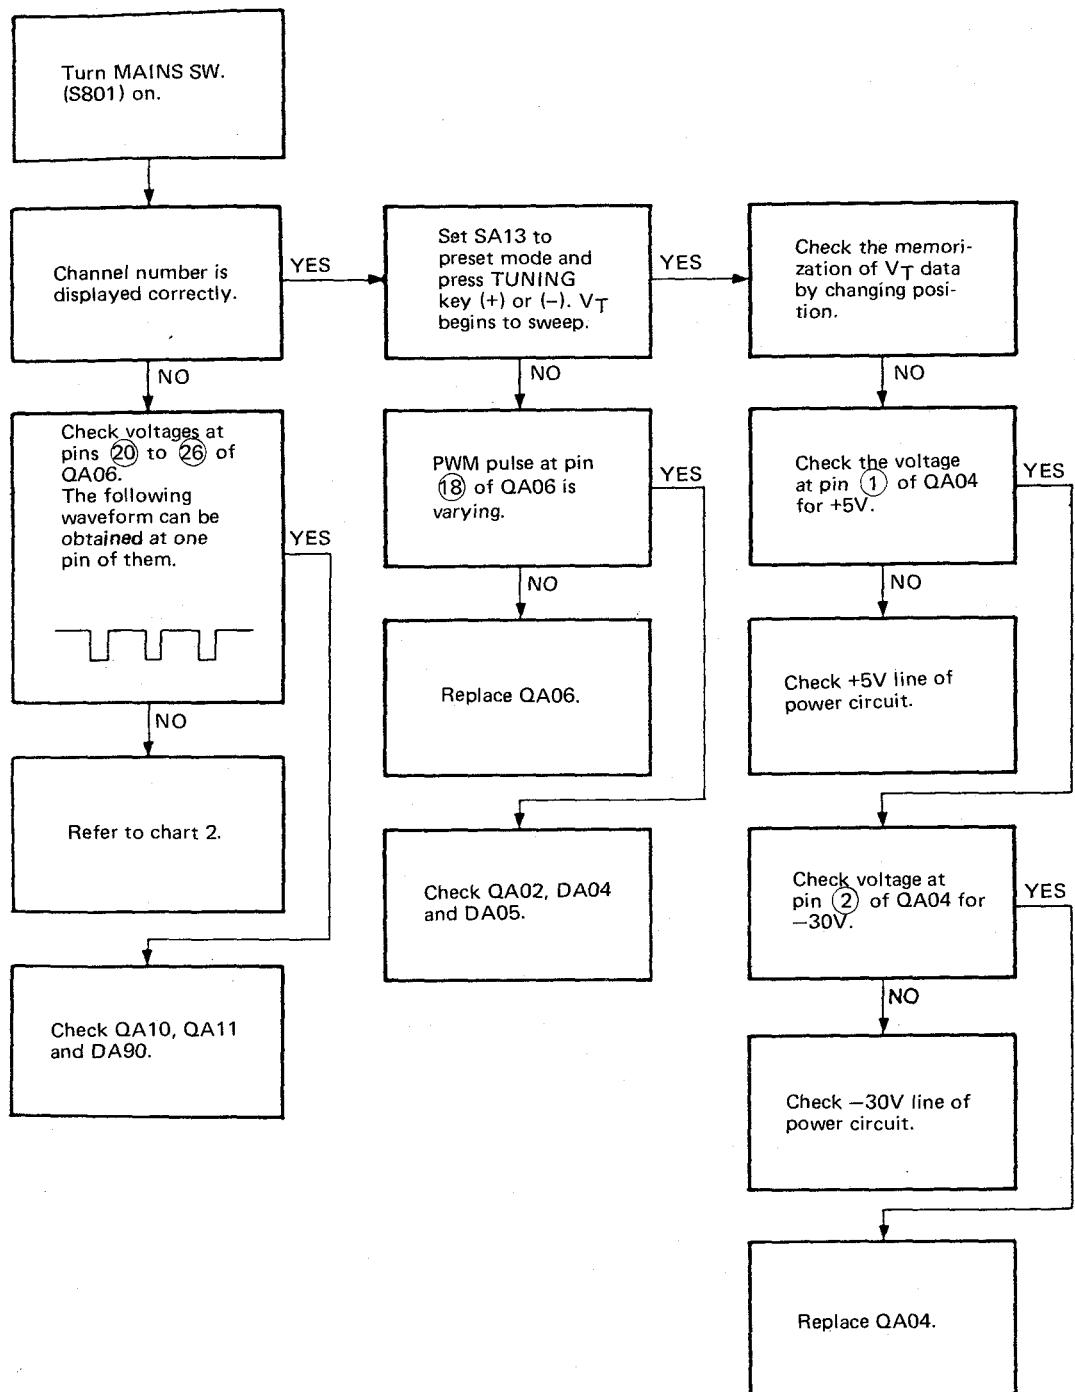

Check/Replace Horiz. OSC Circuit, Horiz. Hold and Horiz. AFC Circuit connected to Pins ⑩, ⑮ of Q340. Check/Replace Q340.

## 10. NO SOUND

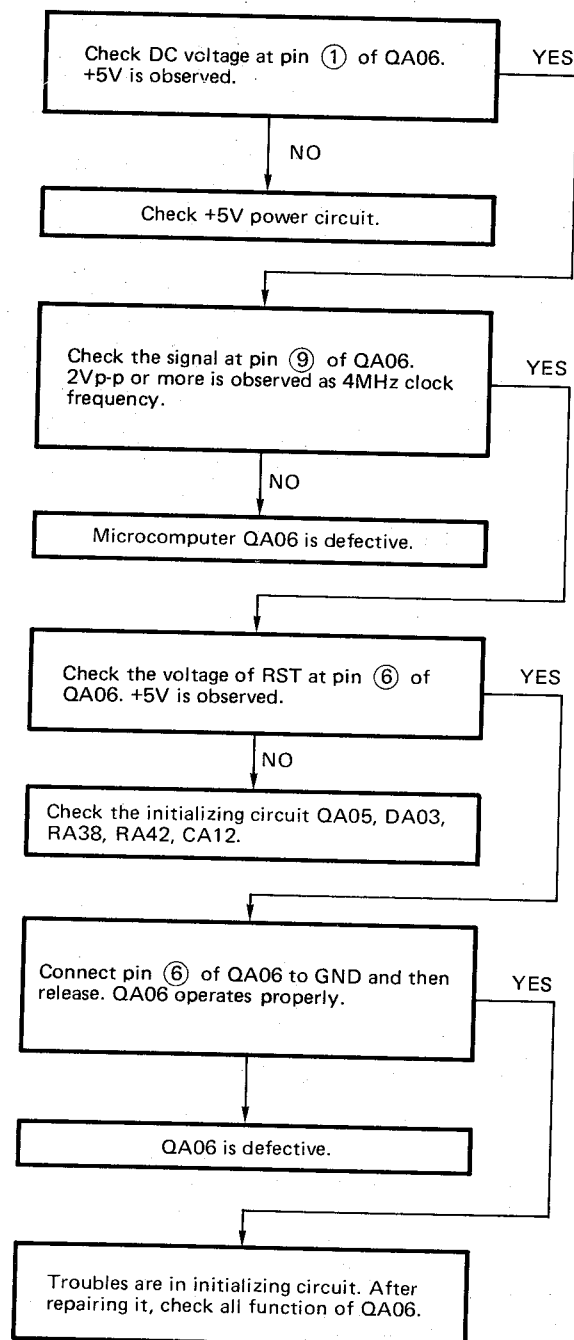

## 11. CHANNEL SELECTOR TROUBLE

[CHART 1]

**[CHART 2] Microcomputer QA06 Operation Check**

**Note:** Before checking Microcomputer, check that control buttons and their connection work properly.

## CHASSIS REPLACEMENT PARTS LIST

**WARNING:** BEFORE SERVICING THIS CHASSIS, READ THE "X-RAY RADIATION PRECAUTION", "SAFETY PRECAUTION" AND "PRODUCT SAFETY NOTICE" ON PAGE 2 OF THIS MANUAL.

**CAUTION:** The international hazard symbols in the schematic diagram and the parts list designate components which have special characteristics important for safety and should be replaced only with types identical to those in the original circuit or specified in the parts list. The mounting position of replacements is to be identical with originals. Before replacing any of these components, read carefully the PRODUCT SAFETY NOTICE on page 2. Do not degrade the safety of the receiver through improper servicing.

**NOTICE:** The part number must be used when ordering parts, in order to assist in processing, be sure to include the Model number and Description.

## SCHEMATIC DIAGRAM

### IMPORTANT SAFETY NOTICE

Component marked with the International Hazard Symbol must, if changed, be replaced by an approved type and must be mounted as the original. This will ensure that the safety standards adhered to during manufacture will be maintained following any servicing procedure.

### OBSERVATION OF VOLTAGES AND WAVEFORMS

1. Voltage readings were obtained using a high impedance digital voltmeter.
2. (—) or ground lead of instruments should be connected to the ground marked (⊥) in the schematic on checking Non-isolated circuit surrounded by mark but should be connected to the points marked (≡) on checking isolated circuit.
3. The voltage readings may vary as much as  $\pm 20\%$ .
4. Check that the Tuning, A.F.C., Brightness, Contrast and Colour controls are adjusted for the best picture, making sure that the Contrast, Brightness and Colour controls are set near to their mid-positions.
5. The waveforms were taken using a standard colour bar signal and were observed using a wide band oscilloscope via a low capacity probe.

### NOTES:

1. This circuit diagram is subject to change without notice.

### EXPRESSION

#### VALUE OF RESISTOR, CAPACITOR and INDUCTOR

1. Resistance is shown in ohm, k=1,000, M=1,000,000.
2. Unless otherwise noted in schematic, all capacitor values less than 1 are expressed in  $\mu\text{F}$  and the values more than 1 in pF.
3. Unless otherwise noted in schematic, all inductor values more than 1 are expressed in  $\mu\text{H}$ , and the values less than 1 in H.

### GROUNDING SYMBOL

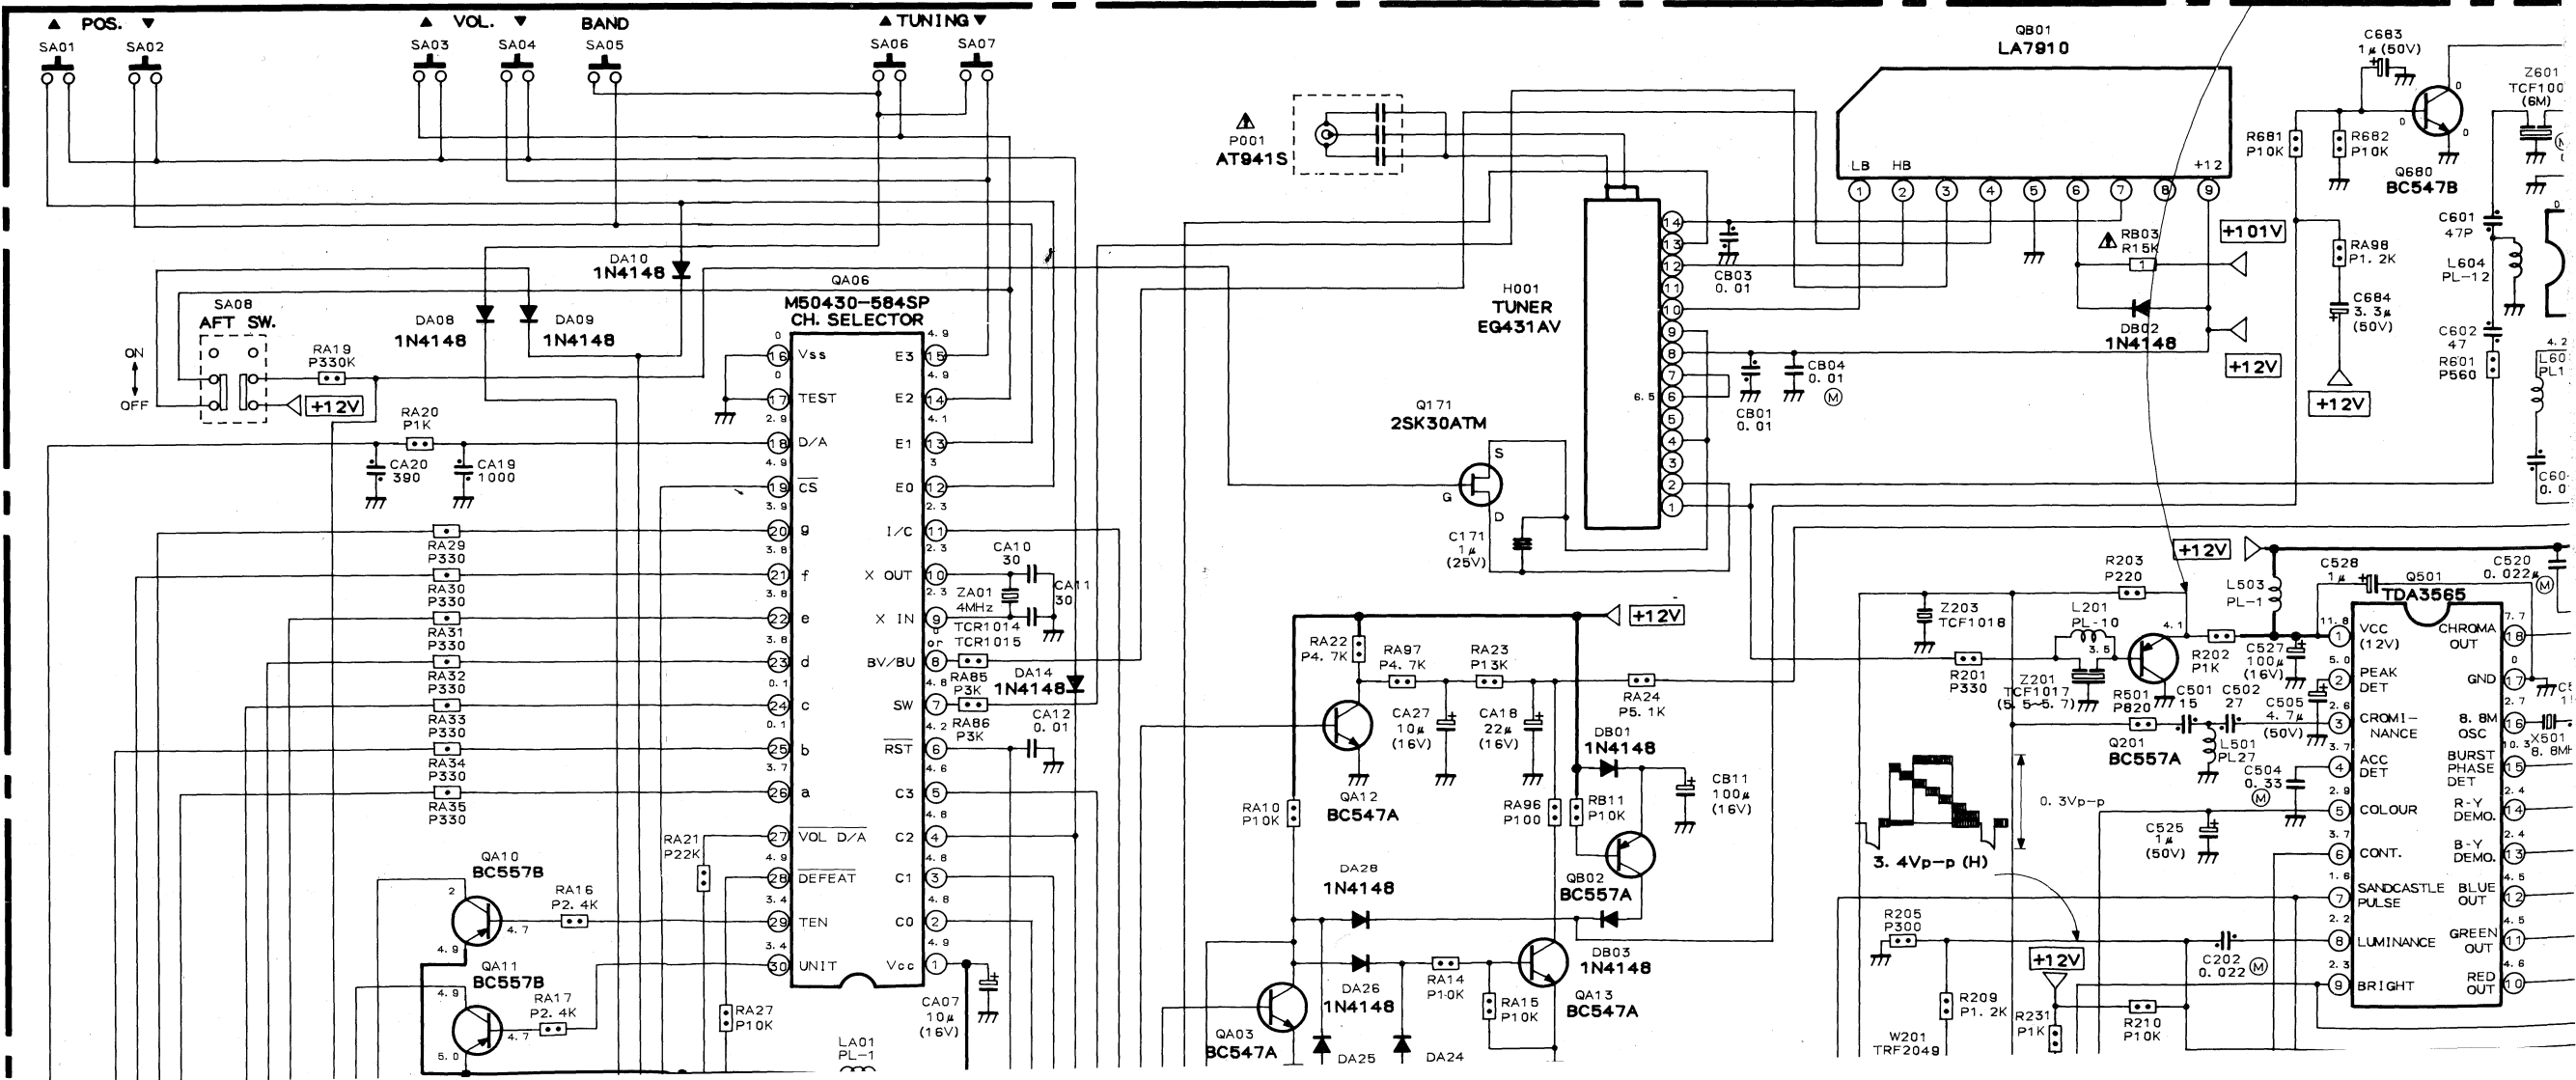

1. ⊥: Non isolated ground, ≡: Isolated ground.

### RESIS

#### Prefix

Ceme

## U902A MAIN BOARD PW5981-1

is subject to change without notice.

## CAPACITOR and INDUCTOR

ohm, k=1,000, M=1,000,000.

ed in schematic, all capacitor values less than 1 are expressed in

ed in schematic, all inductor values more than 1 are expressed in

d,  $\text{---}\text{||}\text{---}$  : Isolated ground.

## RESISTORS

Prefixed to values:

TYPE	MARK
Carbon Comp.	S
Oxide Metal Film	R
Ins. Carbon Film	P
Wire Wound	W
Cement covered W.W.	NO MARK
Fusible Res.	FR

Suffixes to values:

TOLERANCE	MARK
$\pm 1\%$	(F)
$\pm 2\%$	(G)

Suffixes to VR values:

LAW	MARK
Linear	(B)
'C' Curve Characteristic	(C)

Rating Markings:

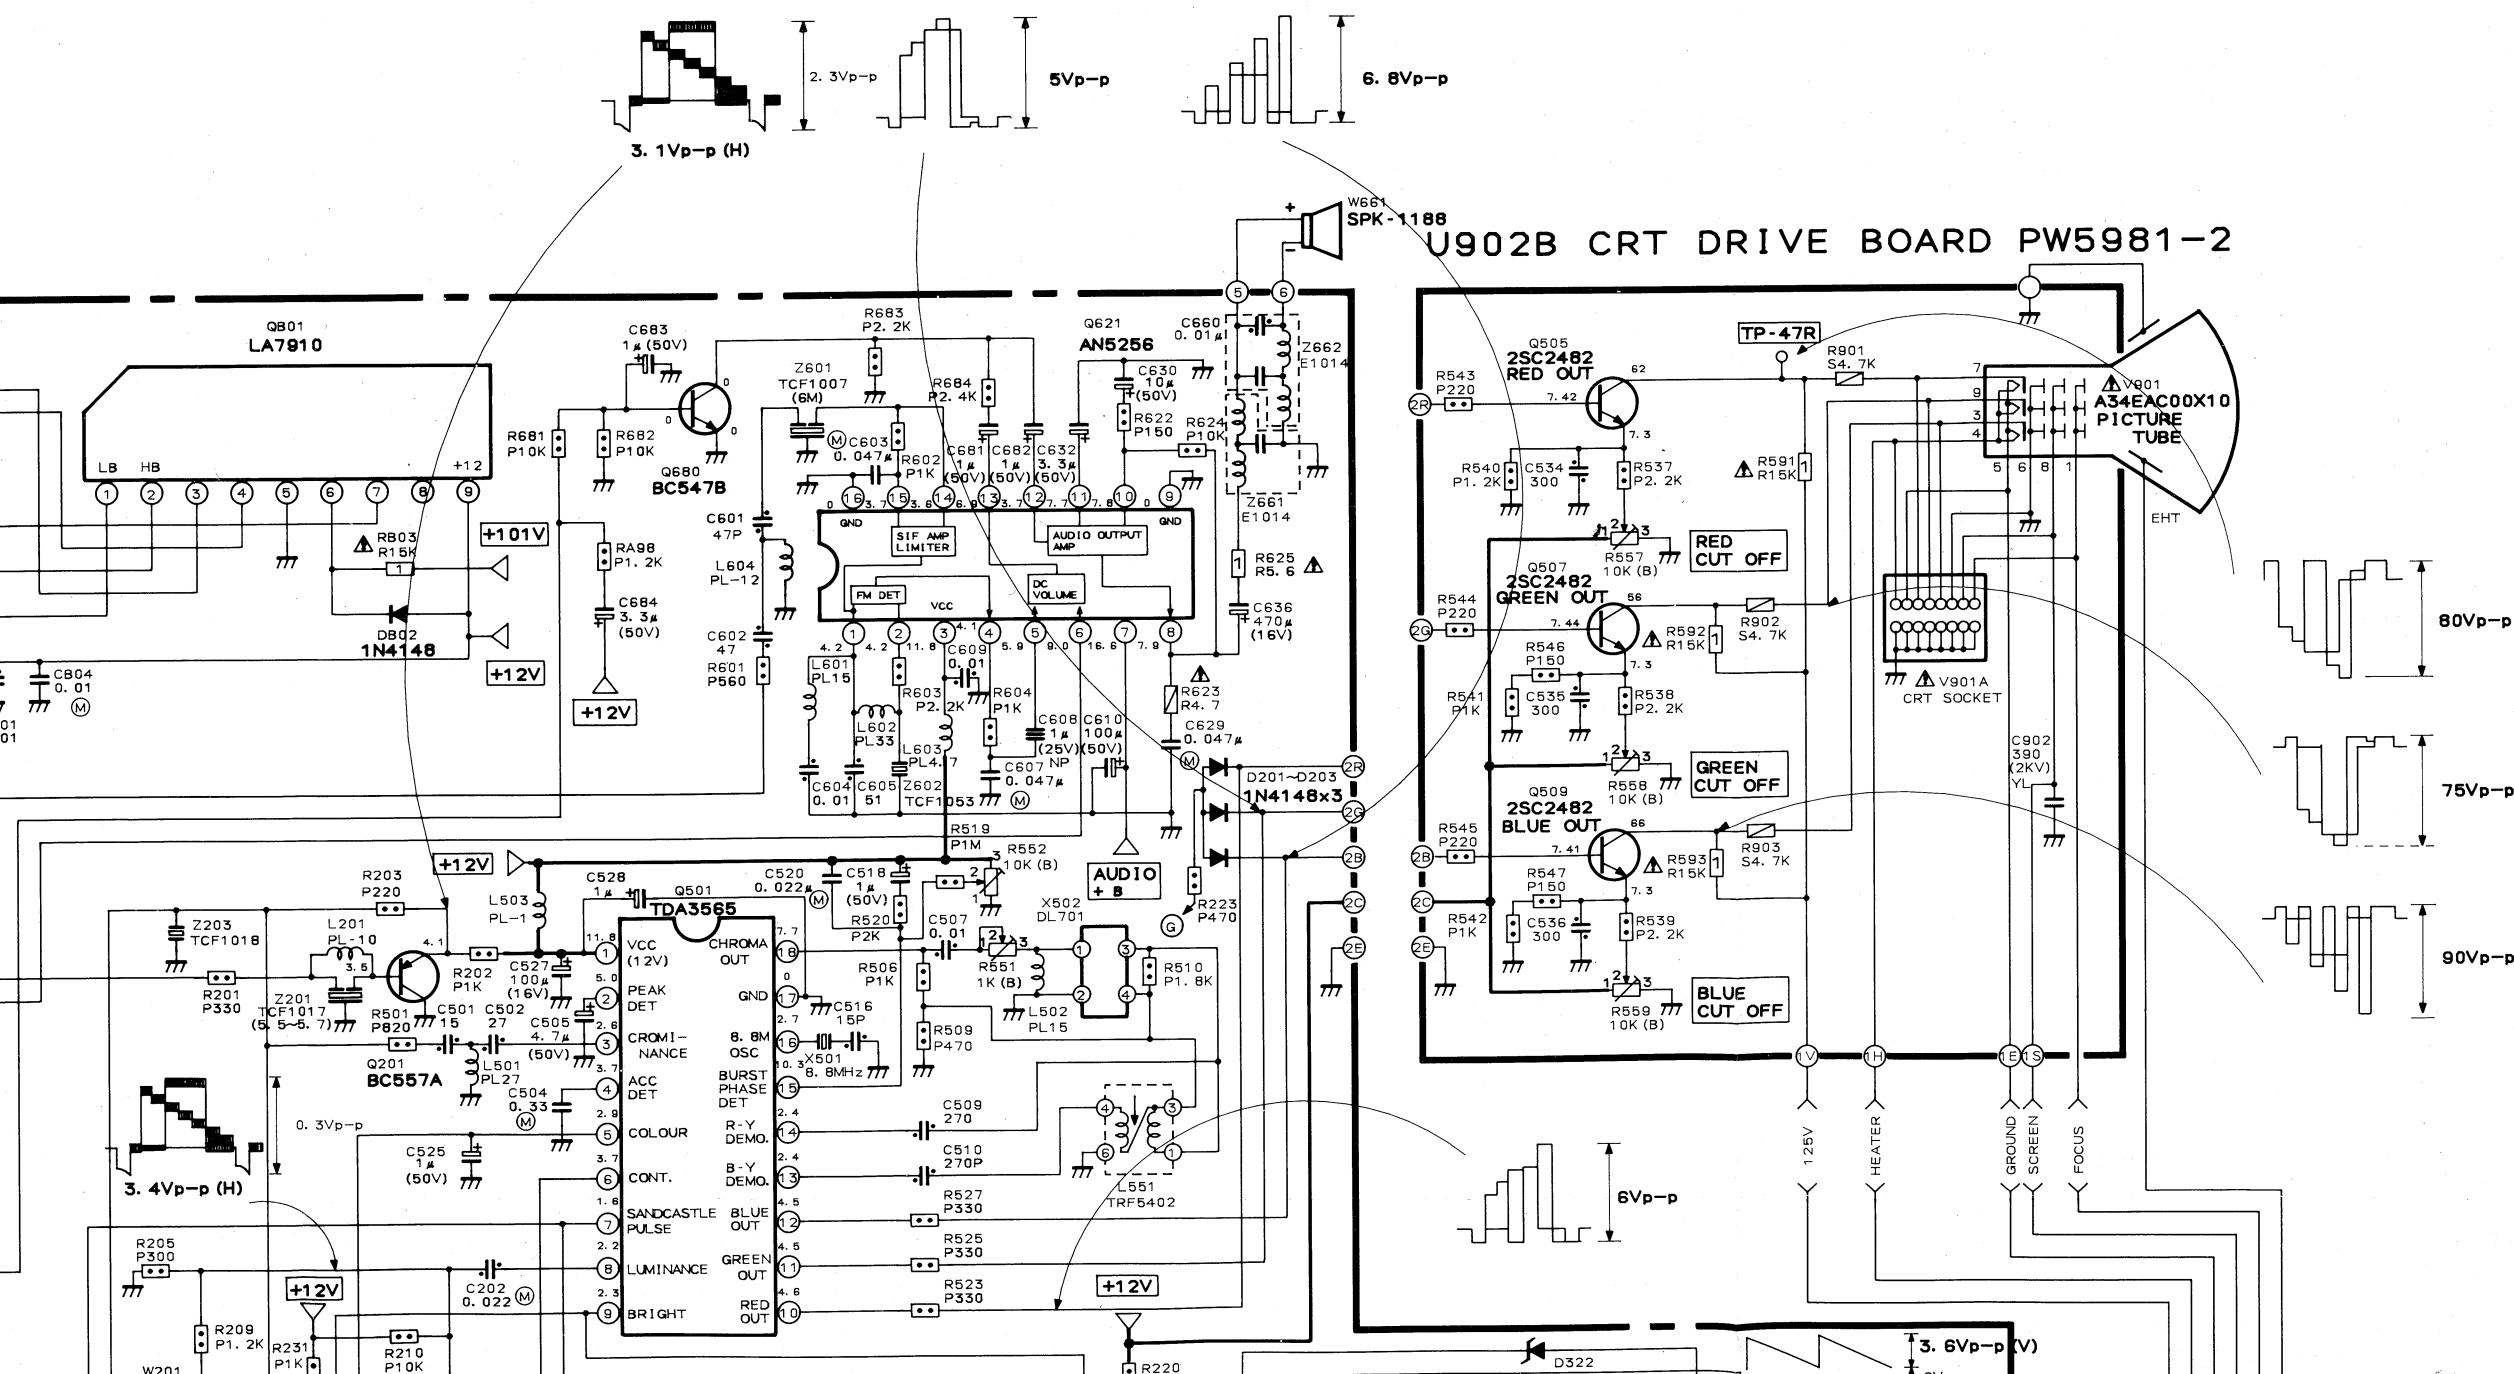

WATTAGE	MARK
1/6W	$\text{---}\text{  }\text{---}$
1/4W	$\text{---}\text{  }\text{---}$
1/2W	$\text{---}\text{  }\text{---}$
1W	$\text{---}\text{  }\text{---}$
